

Receiving

Guided receiving interface foundation. VBA phase performs the atomic multi-row append.

Receiving entry

Product ID:

Product name:

Next Container ID:

Next Barcode:

Batch / Lot:

Expiry date:

Retest date:

Location:

Quantity:

1

New status:

Create/activate a container

Readiness:

NOT READY — select product

Steps (interim manual mode):

- 1. Select Product ID (list from tblProducts).
- 2. Confirm next Container ID and Barcode (formula-generated).
- 3. Enter lot, expiry (if any), location, quantity.
- 4. Append one row to tblContainers (ContainerID, Barcode, ProductID, lot, dates, location, Status=Available).
- 5. Append one Receive row to tblTransactions (snapshot all fields; PreviousStatus=(none)).
- 6. Repeat per container for batch receiving.

tblReceiveStaging (formula staging — not authoritative)

ProductID	Product Name	NextContainerID	NextBarcode

BatchLotNumber	ExpiryDate	RetestDate	StorageLocationID	Status	Quantity	ValidationMessage
